

Ghost Recon - Technical Support

Ghost Recon crashes to desktop before loading (CTD)

Ghost Recon's main menu is hard coded at 640x480, to get it to run on monitors that do not support this resolution you need to run in windowed mode.

- Locate the file "options.xml" in the root GR directory.
- Open it with any text editor

Now find the line

<FullScreen>TRUE</FullScreen>

and change it to:

<FullScreen>FALSE</FullScreen>

There is a full discussion in this issue [HERE](#).
