

GRAW - Technical Support

InstallShield Error 6001

This is due to InstallShield not being able to replace an older copy of Installshield with the files provided in the GRAW Setup.

The workaround for this is to delete the problem folder these files are in and allow the GRAW installer to replace the necessary files.

Delete the folder "**0701**" in the following directory

C:\Program Files\Common Files\Installshield\Professional\Runtime

Unique solution ID: #1061
